

POS Lanes Automation Execution Guide

Prerequisites

Before executing the automation script, ensure the following software and tools are installed and configured.

1. Download TRCConsole

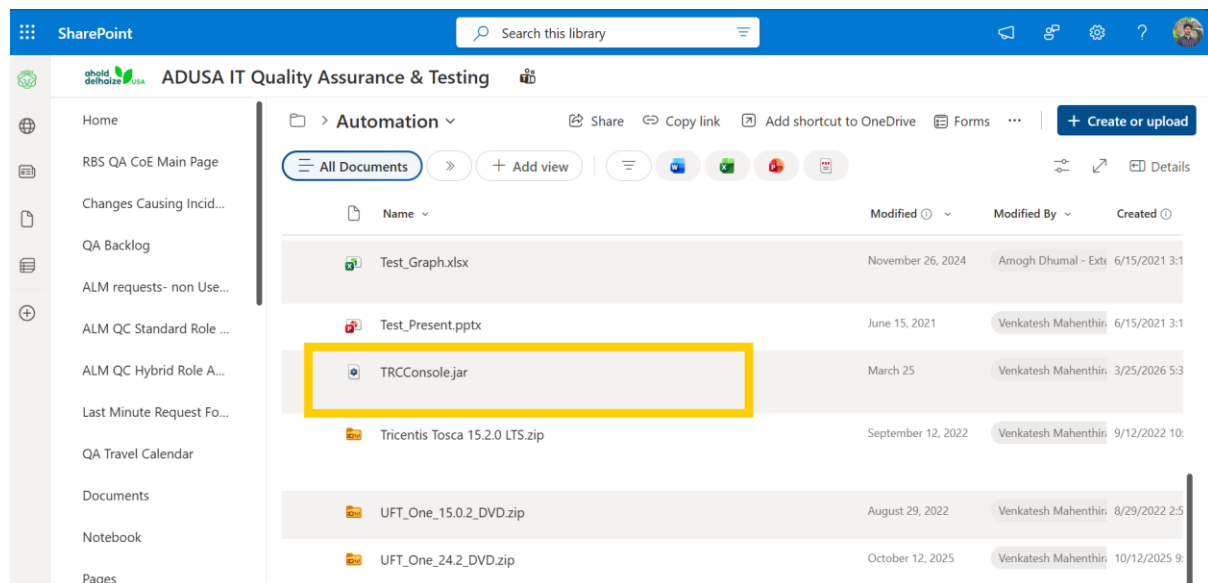

The automation requires the TRCConsole application to connect to the target system.

Steps

1. Download **TRCConsole.jar** from the SharePoint link below:

Download Link:

[ADUSA IT Quality Assurance & Testing - Documents - Automation - All Documents](#)

2. Save the file to a local folder (Example: C:\TRCConsole\).
 3. Ensure the file is accessible and not blocked by Windows security settings.
-

2. Install Java

TRC Console requires Java to run.

Recommended Version: Java 8

Installation Steps

1. Download Java from the approved source:

Download Link: [Eclipse Temurin JDK 8 Downloads](#)

2. Run the installer.
3. Follow the installation wizard and complete the setup.
4. Verify Java installation:
 - Open Command Prompt.
 - Run the command: java -version
5. Confirm that the installed Java version is displayed successfully.

Example Output

```
java version "1.8.0_xxx"
```

If the version is displayed, Java installation is complete.

3. Install UFT (Unified Functional Testing)

UFT is required to execute the automation scripts.

Steps

1. Download UFT from the approved source:

Download Link: [UFT_One_24.2_DVD](#)

2. Run the installer.
3. Complete the installation using default settings unless instructed otherwise.
4. Launch UFT and verify that it opens successfully.

Notes

- Ensure the UFT license is activated.
-
-

Script Setup and Execution

1. Download Automation Script

1. Clone or download the latest automation script from the Git repository.

Repository: [BanuchandhiranM/POS_Lanes_Automation](#)

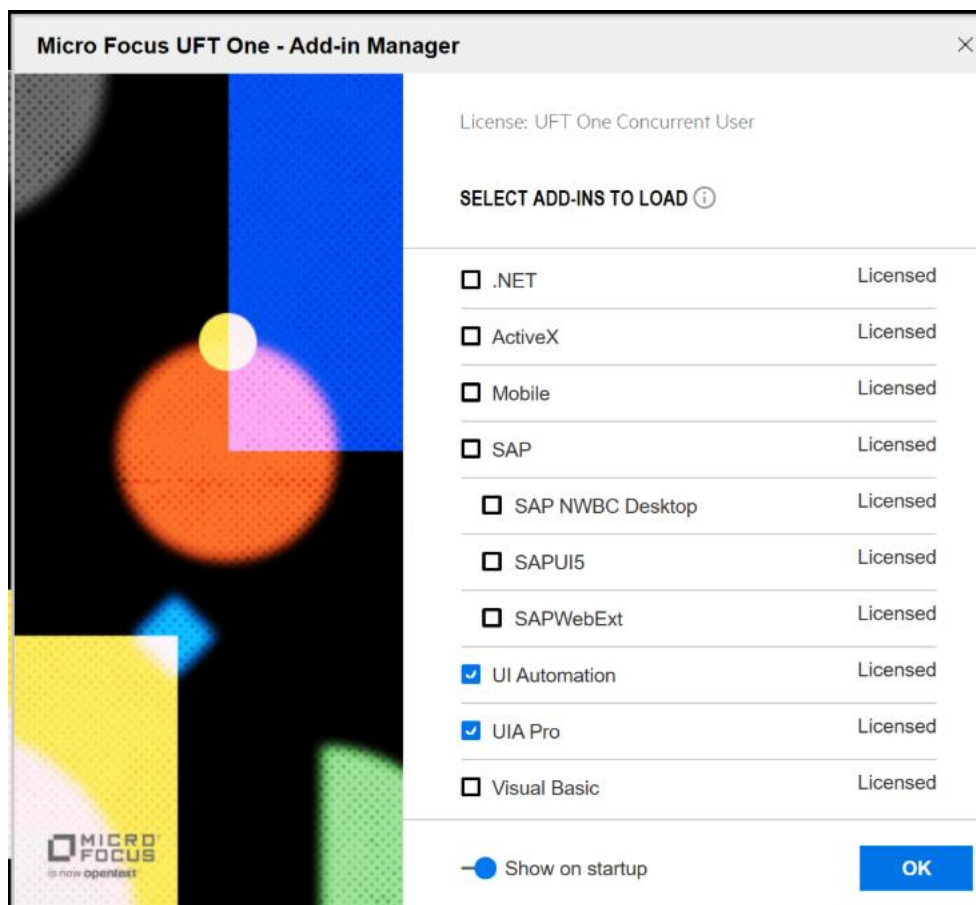

2. Save the project to a local folder.

Example:

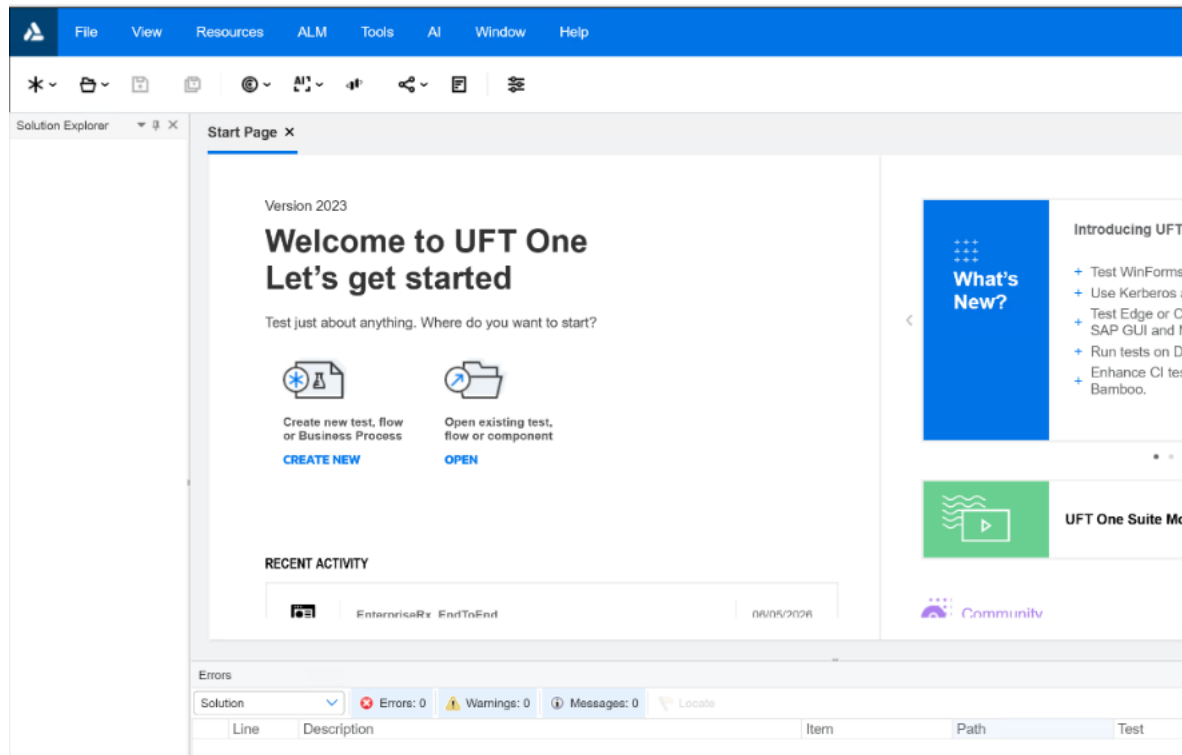

C:\Automation\POS_Automation\

2. Open the Project in UFT

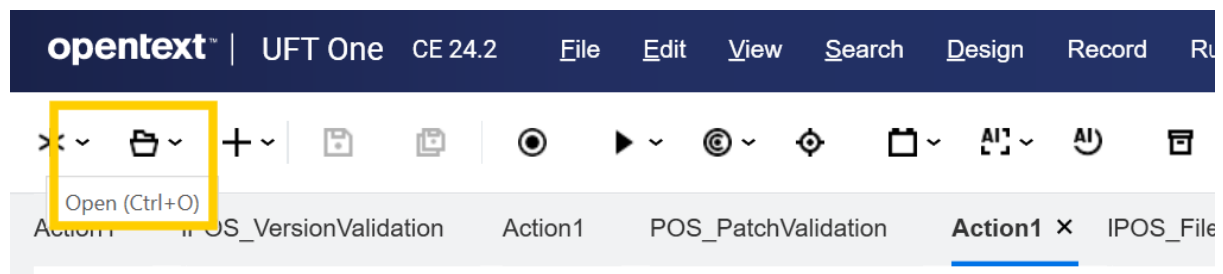

- Launch UFT One.

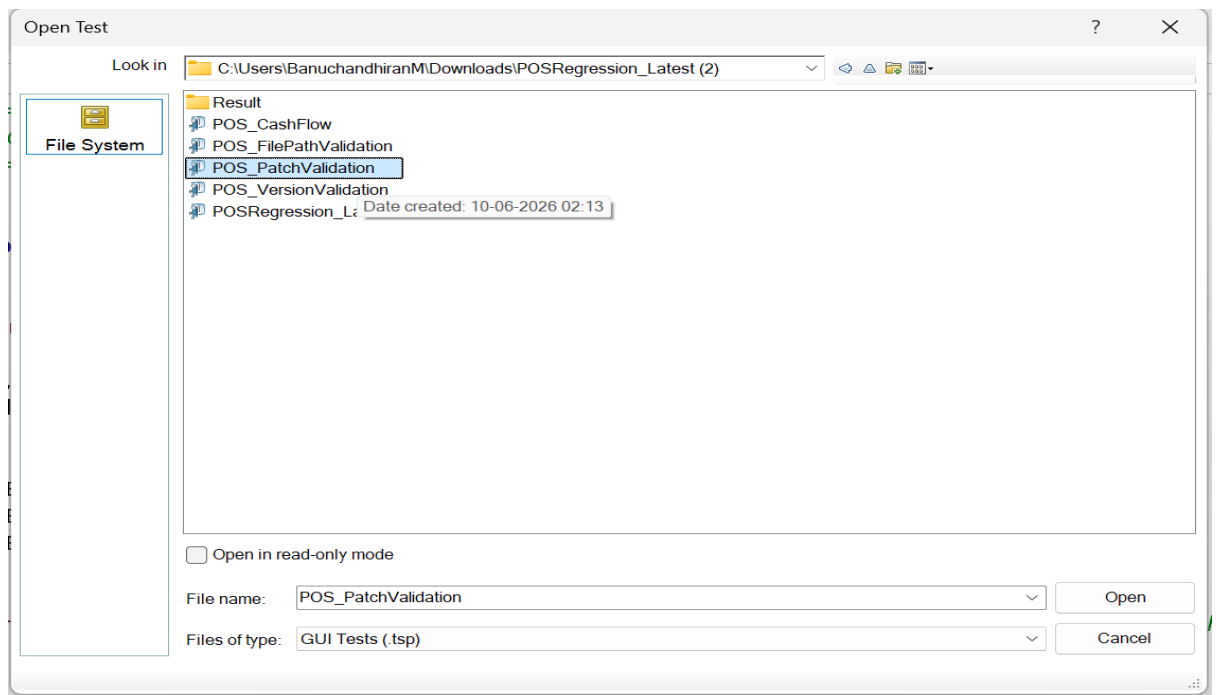

- In the Add-in Manager, select UI Automation and UIA Pro, and then click OK to proceed.

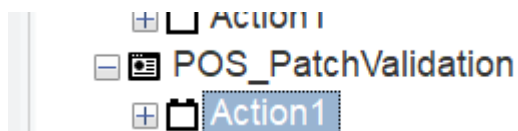

- Open the downloaded project from the local repository.

- Click on open icon or Ctrl+O

- Select the project and click 'Open'
- Verify that all actions are visible in the Solution Explorer and that the script opens successfully.

Verify Login Test Data

Open: POS_Lanes_TestData.xlsx and Navigate to the **LoginData** sheet.

Ensure the following values are entered before execution:

Parameter Name Description

laneAddress	Lane address to be validated
userId	User VNID
userPassword	User password
domainName	Domain name(Delhaize)

	A	B	C	D	E
1	ParameterName	Value			
2	laneAddress	US90L01-09956			
3	userId				
4	userPassword				
5	domainName	Delhaize			
6					
7					
8					
9					
10					
11					
12					
13					
14					
15					
16					
17					
18					
19					

Fill the username and password in this field

[LoginData](#)
[CashFlow](#)
[FileValidation](#)
[VersionValidation](#)

Important: The script will fail to authenticate if the User ID or Password fields are left blank.

Update Local Paths

Patch Validation:-

Once the script is loaded, update the highlighted paths to match your local machine setup before execution.

Excel Test Data Path

Locate the following line:

excelPath = "C:\Users\BanuchandhiranM\Lanes\POS_Lanes_TestData.xlsx"

```
8 Dim excelPath
9 excelPath = "C:\Users\BanuchandhiranM\Lanes\POS_Lanes_TestData.xlsx" '---> change the path as per the local
10
```

Update it with the actual location of the test data file on your machine.

TRC Console Path

Locate the following line:

**WshShell.Run "javaw -jar
""C:\Users\BanuchandhiranM\Downloads\TRCConsole.jar""", 1, False**

```
10 wait 4
19
20 WshShell.Run "javaw -jar ""C:\Users\BanuchandhiranM\Downloads\TRCConsole.jar""", 1, False '---> change the path as per the local
21 Wait 10
22
```

Update it with the location where TRCConsole.jar was downloaded.

Screenshot Storage Path

```
180 Dim screenshotPath
181 screenshotPath = "C:\Temp\HotFix_Notepad_Screenshot.png" '---> change the path as per the local
182
```

If a different location is preferred, update the path in the script accordingly.

Verify Test Data

Open: POS_Lanes_TestData.xlsx and Navigate to the **PatchValidation** sheet.

This sheet contains the list of HotFix IDs that will be validated against the lane during execution.

Validation Before Execution

- Ensure the latest and correct HotFix IDs are populated before execution
- Do not modify the column headers.
- Do not manually update the **Status** column.
- Verify there are no blank rows between HotFix entries.

Expected Result

After successful execution:

- The automation validates each HotFix ID against the lane.
 - The **Status** column is automatically updated with:
 - **PASS** – HotFix found on the lane.
 - **FAIL** – HotFix not found on the lane.
-
-

File Path Validation:-

Once the script is loaded, update the highlighted paths to match your local machine setup before execution.

Excel Test Data Path

Locate the following line:

excelPath = "C:\Users\BanuchandhiranM\Lanes\POS_Lanes_TestData.xlsx"

```
31: wait ↵
32:
33: WshShell.Run "javaw -jar ""C:\Users\BanuchandhiranM\Downloads\TRCConsole.jar""", 1, False '---> change the path as per the local
34:
```

Update it with the actual location of the test data file on your machine.

TRC Console Path

Locate the following line:

**WshShell.Run "javaw -jar
""C:\Users\BanuchandhiranM\Downloads\TRCConsole.jar""", 1, False**

```
10: wait ↵
19:
20: WshShell.Run "javaw -jar ""C:\Users\BanuchandhiranM\Downloads\TRCConsole.jar""", 1, False '---> change the path as per the local
21: Wait 10
22:
```

Update it with the location where TRCConsole.jar was downloaded.

Test Evidence Path

```
379:
380: Dim savePath
381: savePath = "C:\Users\BanuchandhiranM\Lanes\TestEvidence_Filepath.docx" '---> change the path as per the local
382:
383: objDoc.SaveAs savePath
```

Update the Test evidence word document path as per the local

Screenshot Storage Path

```
394 ' TAKE SCREENSHOT AND INSERT INTO WORD
395 '-----
396 Function takeScreenshotToWord(stepName)
397
398 Dim folderPath, fso, fileName, fullPath, rng
399
400 folderPath = "C:\Users\BanuchandhiranM\Lanes\Screenshots\" '----> change the path as per the local
401
402 Set fso = CreateObject("Scripting.FileSystemObject")
```

Update the Screenshot path as per the local

If a different location is preferred, update the path in the script accordingly.

Verify Test Data

Open: POS_Lanes_TestData.xlsx and Navigate to the **FileValidation** sheet.

This sheet contains the list of files and file locations that will be validated on the target lane during execution.

Validation Before Execution

- Ensure all required file paths are populated in the **fileLocation** column.
- Ensure all required file names are populated in the **fileName** column.
- Do not modify the column headers.
- Do not manually update the **Status** or **Remarks** columns.
- Verify there are no blank rows between file entries.

Expected Result

After successful execution:

- The automation verifies whether each file exists in the specified location.
- The **Status** column is automatically updated with:

PASS – File found in the specified location.

FAIL – File not found in the specified location.

Cash Flow Validation: -

Once the script is loaded, update the highlighted paths to match your local machine setup before execution.

Excel Test Data Path

Locate the following line:

excelPath = "C:\Users\BanuchandhiranM\Lanes\POS_Lanes_TestData.xlsx"

```
6  Set version = CreateObject("Scripting.Version")
7
8  Dim excelPath
9  excelPath = "C:\Users\BanuchandhiranM\Lanes\POS_Lanes_TestData.xlsx" '--> Change path as per local setup
10
11 Dim laneAddress
```

Update it with the actual location of the test data file on your machine.

TRC Console Path

Locate the following line:

**WshShell.Run "javaw -jar
""C:\Users\BanuchandhiranM\Downloads\TRCConsole.jar""", 1, False**

```
167 Wait 2
168
169 WshShell.Run "javaw -jar ""C:\Users\BanuchandhiranM\Downloads\TRCConsole.jar""", 1, False '--> Change path as per local setup
170
```

Update it with the location where TRCConsole.jar was downloaded.

Test Evidence

The screenshots and supporting execution evidence are automatically saved to the configured local path specified in the script.

```
148 savePath = "C:\Users\BanuchandhiranM\Lanes\TestEvidence.docx" '----->Change the file path
149 objDoc.SaveAs savePath
150 objDoc.Close
151 objWord.Quit
152 Set objDoc = Nothing
153 Set objWord = Nothing
154 'workbook.Close
155 'excel.Quit
156 End Function
157
158 '=====
159 ' TAKE SCREENSHOT
160 '=====
161 Function takeScreenshotToWord(stepName)
162 folderPath = "C:\Users\BanuchandhiranM\Lanes\Screenshots\" '----->Change the file path
163 Set fso = CreateObject("Scripting.FileSystemObject")
164
```

Change the Document path and Screenshot path as per local.

Open: POS_Lanes_TestData.xlsx and Navigate to the **CashFlow** sheet.

	A	B	C	D
1	ParameterName	Value		
2	laneAddress	US90L01-09956		
3	userId			
4	userPassword			
5	domainName	Delhaize		
6	userCode	700		
7	securityCode	3255		
8	priceOverLimit_1	501		
9	actualPrice_1	150		
10	tabaccoPriceOverLimit	3100		
11	tabaccoActualPrice	1500		
12	priceOverLimit_2	1000		
13	actualPrice_2	800		
14	priceBelowLimit	38		
15	dobForTobacco	12211999		
16	departmentButton	Departments >		
17	miscButton	Misc. >		
18	creditButton	Credits >		
19	couponType	StoreCoupons >		
20	couponName	SC-Grocery		
21	couponAmount	55		
22	totalButton	TOTAL		
23	departmentArray	Array("Grocery")		

This sheet contains all input data required for Cash Flow validation. The automation uses these values to perform transaction processing, price validations, age-restricted item validations, coupon validations, and payment validations on the lane.

Validation Before Execution

- Verify that all mandatory fields are populated.
- Maintain the existing format of the sheet.

Expected Result

After successful execution, the automation will:

- Login to the lane.
 - Perform Cash Flow transaction validations.
 - Validate approval-required price overrides.
 - Validate tobacco age verification scenarios.
 - Validate coupon processing.
 - Validate payment and transaction completion.
 - Generate Test evidence for each validation step.
-
-

Version Validation: -

Once the script is loaded, update the highlighted paths to match your local machine setup before execution.

Excel Test Data Path

Locate the following line:

excelPath = "C:\Users\BanuchandhiranM\Lanes\POS_Lanes_TestData.xlsx"

```
7|
8| '--- Read from Excel FIRST, before anything else ---
9| Dim excelPath
10| excelPath = "C:\Users\BanuchandhiranM\Lanes\POS_Lanes_TestData.xlsx" '--> Change path as per local setup
11|
12| Dim laneAddress, userId, userPassword, domainName
```

Update it with the actual location of the test data file on your machine.

TRC Console Path

Locate the following line:

WshShell.Run "javaw -jar

""C:\Users\BanuchandhiranM\Downloads\TRCConsole.jar""", 1, False

```
21 Wait 2
22
23 WshShell.Run "javaw -jar ""C:\Users\BanuchandhiranM\Downloads\TRCConsole.jar""", 1, False
24 Wait 10
--
```

Update it with the location where TRCConsole.jar was downloaded.

Open: POS_Lanes_TestData.xlsx and Navigate to the **VersionValidation** sheet.

This sheet contains the list of applications, drivers, services, and software components whose versions must be validated on the target lane.

The automation compares the installed version on the lane against the expected version specified in the Excel sheet.

Validation Before Execution

- Ensure all required applications and components are listed.
- Verify that the **ExpectedVersion** column contains the correct version numbers.
- Do not modify the column headers.

Expected Result

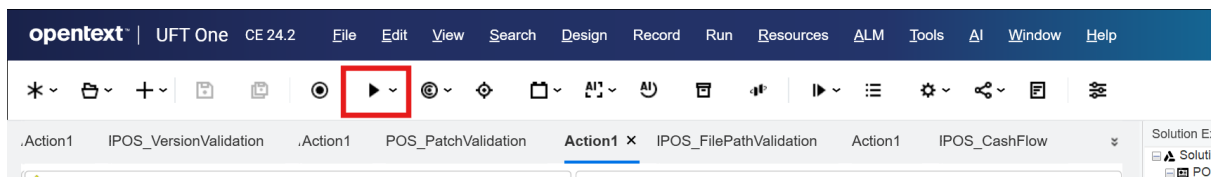

After successful execution, the automation will:

Update the **Status** column with:

- **PASS** – Installed version matches the expected version.
 - **FAIL** – Installed version does not match the expected version.
-
-

Start Script Execution

Click the **Run** button from the UFT toolbar.

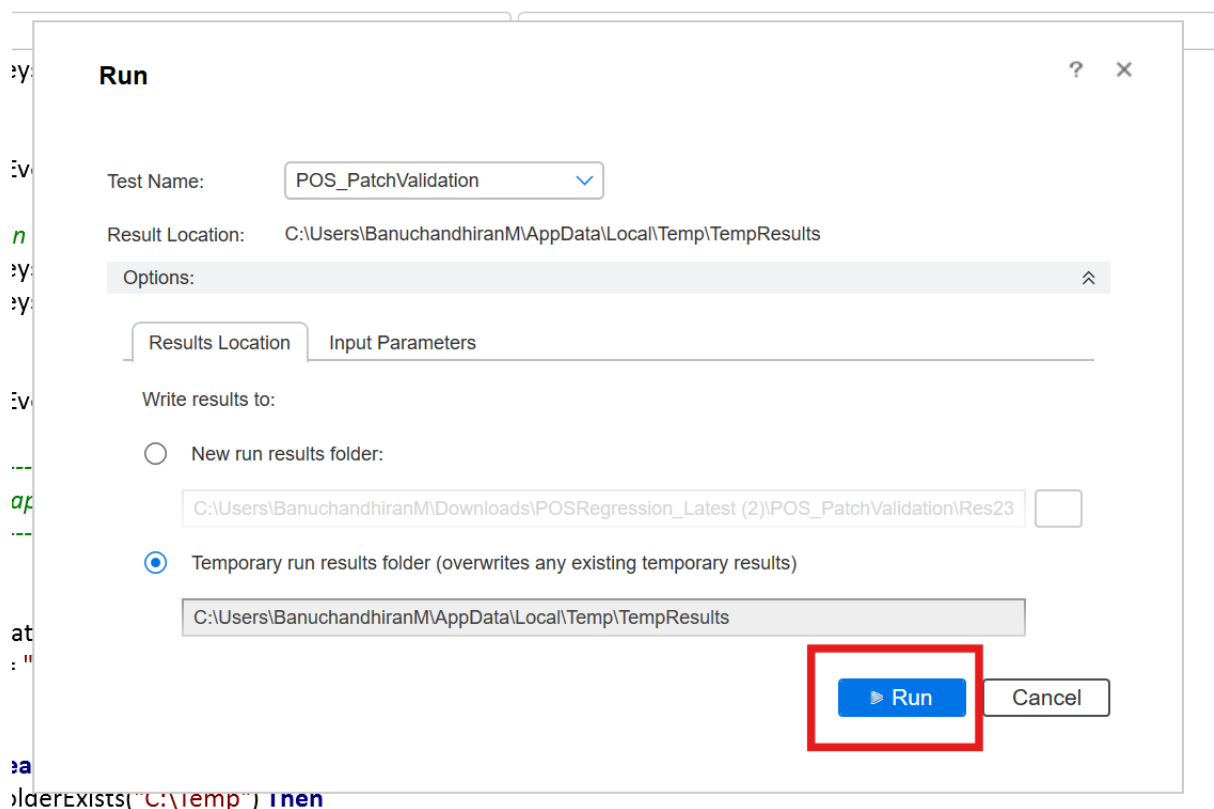

This will open the **Run** dialog window.

Select Result Location

In the Run dialog:

1. Select **Temporary run results folder**.
2. Click **Run**.

The automation execution will start.
